Goal

Attach the provided slime-drip PNG to the **top-right corner edge** of the **first card (Route =** `T` **, header =** `4th & King` **, sublabel =** `T Third` **)** so it looks like it's hanging off the card border (per mockup).

Approach

Use an **overlay image positioned absolutely inside the card**, anchored to the card's top-right corner, then nudged outward with `transform` so it sits on the outer edge.

Implementation steps

1) Put the asset somewhere the app can serve

- Place the drip asset at a public URL, e.g.:
- `public/drip2.png` → referenced as `"/drip2.png"`

2) Add a stable hook for only the first card

Pick ONE of these:

Option A (preferred): add a `data-` **attribute on the first card container**

```
<div class="card" data-card="t-third">
  ...
</div>
```

Option B: add a modifier class

```
<div class="card card--t-third">
  ...
</div>
```

3) Ensure the card is a positioning context

```
.card--t-third,
.card[data-card="t-third"] {
  position: relative; /* required */
  overflow: visible;  /* allow drip to hang outside */
}
```

4) Add the drip overlay element

Add as the last child inside that card:

```
<img class="card__drip" src="/drip2.png" alt="" aria-hidden="true" />
```

5) Position + size the drip to match the mockup

```css
.card--t-third .card__drip,
.card[data-card="t-third"] .card__drip {
  position: absolute;
  top: 0;
  right: 0;

  /* Attach to top-right edge and push outward */
  transform: translate(35%, -35%);

  /* Size: tune for the design */
  width: 160px;
  height: auto;

  /* Don't block interactions */
  pointer-events: none;

  /* Layering: above card background and content */
  z-index: 3;
}
```

Optional variant: no extra markup (pseudo-element)

If you do not want to add an `<img>` node:

```css
.card--t-third,
.card[data-card="t-third"] {
  position: relative;
  overflow: visible;
}

.card--t-third::after,
.card[data-card="t-third"]::after {
  content: "";
  position: absolute;
  top: 0;
```

```
    right: 0;
    transform: translate(35%, -35%);

    width: 160px;
    height: 160px;

    background: url("/drip2.png") no-repeat;
    background-size: contain;

    pointer-events: none;
    z-index: 3;
}
```

Acceptance criteria

- Drip appears **only** on the **T / 4th & King / T Third** card.
- Drip is visually attached to the **top-right border** and hangs outside the card.
- Clicking/tapping elements inside the card still works (drip never intercepts clicks).
- Drip scales acceptably across screen sizes.

Tuning knobs

- Corner attachment offset:
- `translate(25%, -25%)` (closer in)
- `translate(45%, -45%)` (more outside)
- Responsive width:

```
  width: clamp(120px, 18vw, 180px);
```

- If drip must be behind text but above background:
- set `z-index: 1` on drip and `z-index: 2` on the card content wrapper.
